

AI Usage Log

****Project:** MoMo Transaction Analyzer**

****Team:** EWD 14**

****Date:** January 2026**

AI Usage Summary

- ****Diagramming:****

We used dbdiagram.io solely for drawing and exporting the ERD diagram image, based on our team's original database design. No AI was used to generate or design the database structure, relationships, or business logic.

- ****Grammar and Syntax Checking:****

AI tools were used for grammar and syntax checking in documentation, and for code syntax verification. No business logic, technical explanations, or reflection content was generated by AI.

- ****Research:****

We used AI tools to research MySQL best practices (such as index usage and constraint recommendations). All research was cited where appropriate.

- ****Attribution:****

All technical explanations, database design, and documentation are original and team-specific. Any AI-assisted code or text is clearly marked and limited to non-logic tasks.

Compliance Statement

This project fully complies with the course AI usage policy. All substantive design, logic, and reflection content was created by team members. AI was used only for allowed purposes and is transparently documented here.

****Prepared by:****
